

PROPERTIES

Stops leaks in all heating systems

- Can be used to restore leaks in closed as well as open heating systems.*
- Prevents and seals leaks fast and efficiently.
- Does not impair flow.
- Simply to use.
- Prevents rust and corrosion.
- Enhances the pump lubrication.

TECHNICAL INFORMATION

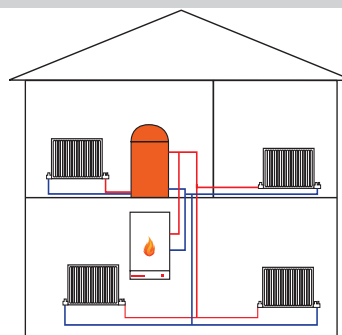

Base: water.

Appearance: granular liquid with high viscosity.

Colour: red-brown.

pH: neutral.

Consumption: 1 bottle adequate for 75L liquid. Shelf life: 36 months (please shake rigorously before use if kept on the shelf for this length of time) keep dry, cool and frost-proof. Safety measures: consult the Safety Data Sheet.

APPLICATIONS

- Quickly and permanently seals leaks.
- Remedial action: quickly and permanently seals leaks in radiators, convectors, circulation pumps, central heating pipes and underfloor heating systems etc.
- Preventive action: ideal to prevent the occurrence of leaks.

USE

- Depressurise the system.
- Check the water purity; if necessary flush and change the water.
- Shake PLUMB7 well before use.
- Add the necessary amount of PLUMB7 to the system through the highest positioned radiator.
- Run the circulation pump.
- If necessary, bleed the system and bring the water level up to standard.

Please note: if the system leaks water, the treatment with PLUMB7 needs to be repeated.
