

Super Aktivator

ACTIVATES SUPER

- ✓ Allows bonding on porous surfaces
- ✓ Pressing components together no longer necessary
- ✓ Increases the filling capacity of Super

Technical Info

Packing

Super Aktivator - aerosol 200ml

501105000

Product

Characteristics

- Super Aktivator speeds up the curing of Super, making the adhesive even more versatile:
 - after treatment, Super hardens even in thicker layers and it is now also possible to glue porous materials.
 - It is the perfect combination of strength, bonding speed and security, simplicity and perfect durability.

Applications

Allows also the bonding of porous materials, such as bluestone, chipboard, stone, etc. with Super.

Use

To bond:

- Apply only on one side of a clean, dry, grease and dust-free surface.
- Apply on the least porous surface.
- Apply a thin coat of Super on the other surface.
- Join together and let the Super harden.

To fill gaps:

- Use dry and clean sand or sawdust as possible fillers.
- Apply Super until the filler is saturated.
- Spray Super Aktivator from a distance of 30 cm.
- The filling can be sanded after curing. Fill deeper holes with multiple layers to avoid overreaction.
